FOREWORD

1. Purpose and Scope

The Economic Intelligence Statistical Handbook, 1969 provides statistics on the economies of the Communist countries and the countries of the North Atlantic Treaty Organization (NATO)—including France. The content and format have been revised to make possible more explicit comparisons and new tables and graphics have been added.

In general, the data in the Handbook are for 1955, 1960, and 1963-68. A summary table is presented for European NATO, Eastern Europe, each of the Communist countries, selected NATO countries, India, and Japan. The data for Mongolia, because of their scarcity, are presented in a summary table but are not included in the individual commodity or aggregative tables. The graphics are designed for use as visual aids. Footnotes have been used liberally to give definitions, exceptions, and methodology. Footnotes to the commodity tables give more detailed definitions of the data than those appearing for the commodities on the summary table for each country. Therefore, the footnotes to the commodity tables should be referred to when a complete description of the data shown is required.

2. Rounding of the Totals

In each table the data for the individual countries have been rounded consistently. Because of the limitations in the cumulative data, the totals have been rounded, with some exceptions, to three significant digits. In general, zeros appearing after the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation.

Totals are not presented if missing data are believed to represent a significant part of the total. In general, data are not given for countries for which a significant amount of data is not available. Because of rounding, components may not add to the totals shown.

3. Symbols

The abbreviation N.A. (not available) is used when information about the existence of the data or the magnitude of the data is not available, and the abbreviation Negl. (negligible) is used when the magnitude of the data is less than half of the final unit employed for each table. The metric system is used throughout.

4. Classification of Data

25X1

 $ar{}$ The unclassi-

fied data, indicated by an asterisk (*), may be official data of the country cited or may be unclassified estimates of this Office. Tables in which all of the data are unclassified have been identified accordingly. Classified data, however, frequently occur on the reverse of the page, and, therefore, caution should be exercised if pages are removed from this publication.

5. Sources

The data given for the most recent years are frequently preliminary and subject to revision. The data for the Communist countries are estimates of this Office, official data from the country cited, or estimates made by other organizations. The data for the NATO and other Free World countries are from publications of the United Nations and the Organization for Economic Cooperation and Development (OECD), are from unclassified publications of other international organizations or individual countries of the Free World, or are estimates of this Office.

6. Terms

Unless otherwise indicated, the term Communist Countries includes the USSR, the countries of Eastern Europe, Communist China, North Korea, North Vietnam, Albania, Cuba, and Yugoslavia; the

term Eastern Europe includes Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Rumania. The term NATO includes the United States, Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the United Kingdom, and West Germany. The term developed countries includes Austria, Belgium, Denmark, Finland, France, Iceland, Ireland, Italy, Liechtenstein, Luxembourg, Norway, the Netherlands, Sweden, Switzerland, the United Kingdom, West Germany, Australia, Canada, Japan, New Zealand, South Africa, and the United States. The term less developed countries of the Free World includes (1) all countries of Africa

except the Republic of South Africa, (2) all countries of the Far East except Japan, (3) Portugal and Spain in Europe, (4) all countries in Latin America except Cuba, and (5) all countries in the Near East and South Asia.

As far as possible, production data for the Saar have been included in the data for West Germany for all years, unless otherwise indicated. Data for Alaska and Hawaii, when available, have been included in the total for the US. Data for any of the above country groupings may or may not include all of the countries listed above, depending on the commodity or services listed.

^{*} An asterisk indicates that the data are unclassified.

^{*} For the individual European NATO countries, the ratios for converting gross national product (GNP) in national currencies at 1967 prices into 1967 US dollars on the basis of US purchasing power equivalents are derived from the 1950 ratios in Milton Gilbert and Associates, Comparative National Products and Price Levels, OEEC, Paris, 1958, using the geometric mean of European and US weighted ratios. These 1950 ratios were moved to 1967 by applying the following factor: the derived price indexes for each European country for 1950–67 divided by a derived price index for the US for 1950–67. These price indexes were derived for each country by dividing the growth of GNP in current prices by the growth of GNP in constant prices. The ratios thus obtained were applied to the GNP values, given in the national currencies in 1967 prices. The total GNP for the European NATO countries is based on the estimate that the total GNP of the individual countries shown represents 95 percent of the total European NATO GNP, which is the approximate relationship derived from other sources. The values shown for the Communist countries, except for North Korea, have been calculated in a manner which makes them reasonably comparable with the values shown for the NATO countries.

b The base years are 1955 and 1963, respectively. Rates of growth are derived from unrounded data.

[·] Converted at the exchange rate of 1.081 Canadian dollars to US \$1.

d Including data for West Berlin.

[•] Converted at the exchange rate of 1.2 won to US \$1.

¹ Rate of growth for 1964-66.

* An asterisk indicates that the data are unclassified.

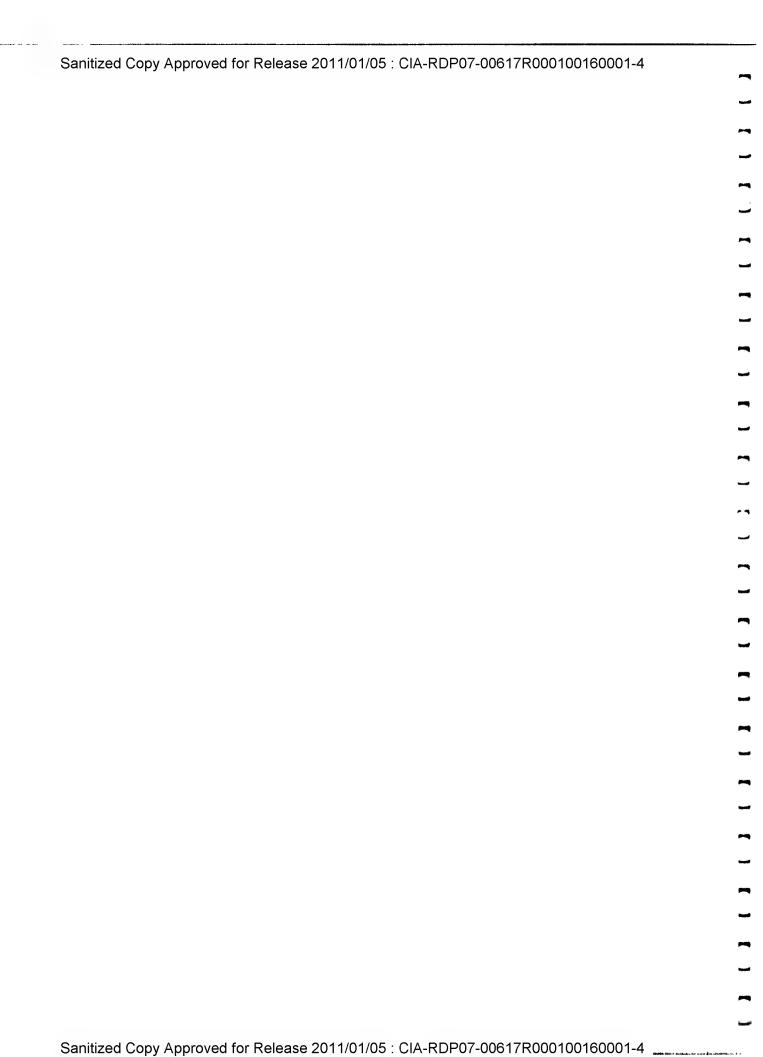

* US market prices. Total Soviet gross national product (GNP) and the various end uses were converted to dollars not by the official rate of exchange but by the average purchasing power ratio of the dollar and the ruble calculated from actual or estimated prices paid for various goods and services in the two economies. For GNP as a whole and for each end use component of GNP, these average ratios (ruble-dollar ratios) were estimated by weighting individual price ratios by both US and Soviet expenditure weights. The geometric mean of the US weighted and Soviet weighted ratios was then used for the conversion of Soviet values into dollars.

The magnitudes for the Soviet end use components were calculated to measure quantity of output compared with the US but not the cost in resources. The share of total economic resources devoted to a particular end use or the share of total output originating in an individual sector (for example, agriculture or industry) in the USSR should be measured in internal ruble prices and costs. Agriculture alone, for example, uses 35 percent of the civilian labor force, or 43 million people, as a result of the inefficiency of that sector in the USSR.

The adjusted end uses of GNP are defined as follows:

- (1) Consumption comprises personal expenditures for goods and services for all purposes and noninvestment outlays by government for goods and services for health and education. (The personal consumption expenditures for the US are \$492.2 billion.)
- (2) Investment is defined (a) for both the US and the USSR as the sum of expenditures for gross private domestic investment net of inventories; for public construction other than that for defense facilities; for equipment purchased by the government except that for defense; and for defense stockpiling and defense-production expansion; and (b) for the US, as also including expenditures by state and local government for development of atomic energy. (The gross private domestic investment for the US is \$114.3 billion.)
- (3) Defense as a component of GNP comprises government purchases of goods and services for the military services, federal government expenditures on atomic energy development, and outlays on space research and technology. Defense excludes stockpiling activities and net military grants for foreign military assistance. (The federal government purchases of goods and services for national defense, excluding purchases by NASA, for the US are \$72.4 billion.)
- (4) Other includes inventory change, administration, net exports, and statistical discrepancy. Administration as a component of GNP is the residual left after all current expenditures for national defense, health, and education and all capital expenditures are subtracted from government purchases of goods and services. (There is no equivalent category for the unadjusted data for the US.)
- ^b The sum of the end use components of Soviet GNP, valued in dollars, does not equal the dollar value of aggregate GNP, because of the use of average ruble-dollar ratios in converting from ruble values to dollar values. Nevertheless, the individual end use components were not adjusted to agree with the total, since the US-USSR comparisons shown are believed to give the best available description of relative size.

AGGREGATIVE DATA

• Because of the well-known difficulties in using Soviet prices as a measure of resource burden, the shares of gross national product (GNP) in this table are based on GNP at factor cost. In calculating GNP at factor cost, 1960 end use weights have been revised from an established price basis to a factor cost basis by subtracting turnover taxes and profits and adding amortization charges, implicit interest costs, agricultural land rent, and subsidies. These revised weights are then moved over time by indexes of the value of the various end uses in constant market prices.

^b Preliminary.

c Civilian research and development and expenditures on capital repair.

* An asterisk indicates that the data are unclassified.

• The individual series for gross national product (GNP) for the various countries are acceptable when the data are not to be used for international comparisons. The series are inadequate for international comparisons because they are based on the conversion of GNP into a single currency using rates of exchange at par value. Such international comparisons are of doubtful value because the rates do not adequately indicate relative purchasing power. The more correct data for the majority of the countries for comparison of GNP are to be found in Table 1, p. 1.

^b The base years are 1955 and 1963, respectively. Rates of growth are derived from unrounded data.

• Including data for West Berlin.

^{*} An asterisk indicates that the data are unclassified.

^{*} Indexes for the NATO countries are value-added weighted indexes of intermediate and final products of industry. Industry includes manufacturing and mining and, in most countries, public utilities. Data for Belgium, France, Italy, Luxembourg, the Netherlands, the UK, and West Germany exclude the manufacture of food, beverages, and tobacco. The indexes for the Communist countries are estimates of this Office—constructed as nearly as possible on the same basis as the indexes for Western countries—or other calculations accepted by this Office. The indexes for the Communist countries include manufacturing, mining, and public utilities.

^b The base years are 1955 and 1963, respectively.

[·] Preliminary.

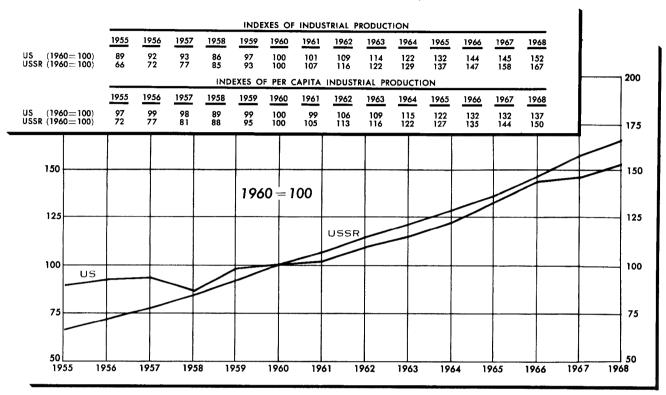

d Index of gross values for individual commodities and branches aggregated by 1960 value-added weights. The three sectors covered—materials, machinery, and nondurable consumer goods—constitute 47.0 percent, 30.1 percent, and 22.9 percent, respectively, of the value-added weights for industrial production. This index is as comparable as data will permit with the index of US industrial production of the US Federal Reserve Board.

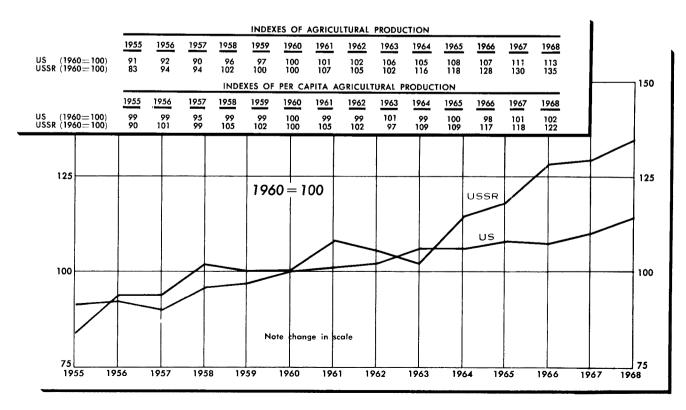

Estimates of this Office computed by applying value-added weights to data for commodity production. The data are fragmentary and uncertain; therefore, the index should be regarded as providing only a tentative indication of the general level and trend in production.

f Based on the midpoint of the range.

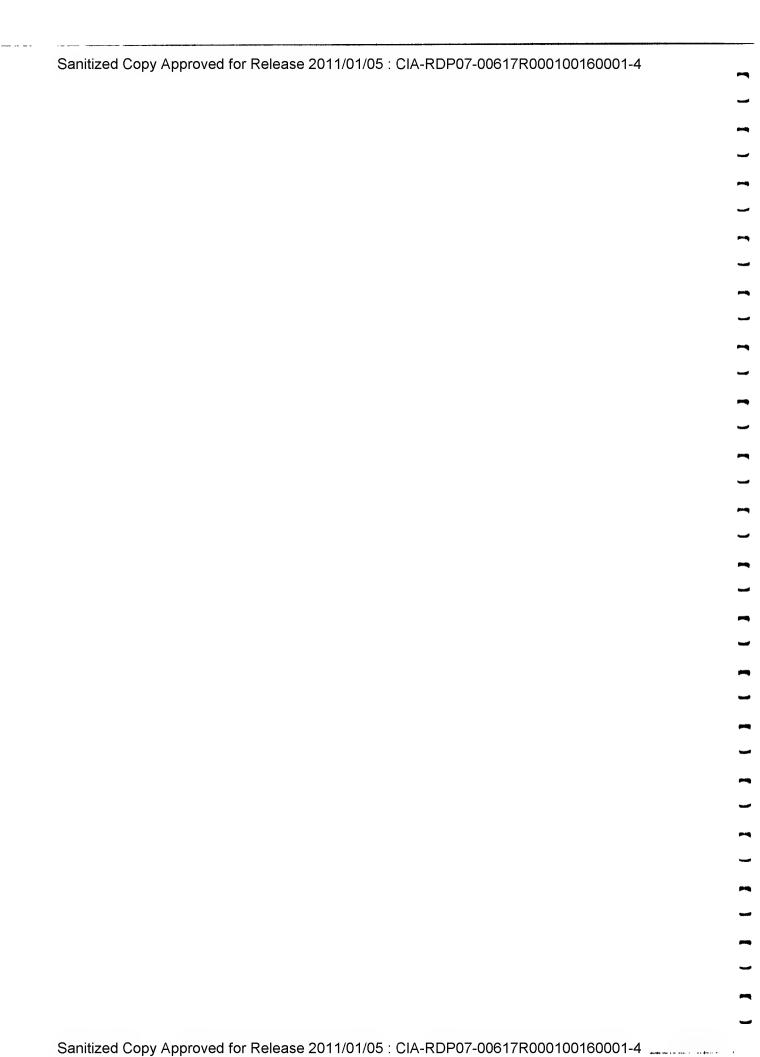

Rate of growth for 1964-67.

^a The indexes of industrial production are estimates of this Office—constructed as nearly as possible on the same basis as indexes for Western countries—or other calculations accepted by this Office. The indexes include manufacturing, mining, and public utilities. The indexes for agricultural production are estimates of this Office—based on the gross production of crops minus seed, waste, and feed (including imported grain), and livestock products (including changes in livestock numbers) using FAO/OECD Western European regional price weights (1952–56 average).

^b The base years are 1955 and 1963, respectively.

^{*} These indexes are measures of the "gross" value of production of industry at constant prices. The gross value of production is, in general, the sum of the value of output of all industrial enterprises. The definition of industry in Communist countries includes not only manufacturing, mining, and public utilities, as in most Western definitions of industry, but also certain other activities (varying from country to country).

^b The base years are 1955 and 1963, respectively.

c Estimated.

d Rate of growth for 1964-65.

[·] Socialized industry only.

[•] Data differ from those presented in the previous Handbook because of a revision in Soviet classifications of investment. Investment in agricultural procurement facilities and in forestry was transferred from the agricultural sector to the services sector. This revision affected the distribution between productive and nonproductive investment as well, but not total investment.

b Data are expressed in investment prices of 1 July 1955 adjusted to reflect subsequent introduction of the following changes: new unit valuations (1956), reduction of overhead cost norms (1958), reduction of equipment installation prices (1959), and reduction of prices for project-survey work and of unit valuations for some types of construction-installation work (1962).

e Estimated to the nearest hundred million rubles.

d Preliminary.

[•] Rounded to the nearest hundred million rubles.

⁴ Excluding the construction industry. Investment figures for individual branches of industry have been estimated for 1955 and 1963.

Cement	Million metric tons	87.5	100-105	3.2	7.2	12

[•] The base year is the year before the first year of the stated period, and percentages for the plan data are based on the midpoint of the ranges, where given.

^b The official Soviet measure is based on a Marxist concept of national income and differs significantly from the concept used in Western market economies. For example, the Soviet measure excludes the value of services and overstates the contribution of industry by including all indirect taxes.

[°] Official "gross" value series.

d Including production of gas from coal and shale. Table 88, p. 84, excludes production of gas from these sources.

Table 15

Distribution of Defense and Space Expenditures, by Major Mission, in the US and the USSR 1968

	US b (Fiscal Year)	USSR ° (C	alendar Year)
štratogic attack	Billion Current US \$	Billion 1966 US \$	Billion New Rubles ^d
Strategic attack	4.8	6.5	2.6
Strategic defense		5.4	2.0
General purpose	32.6	17.3	5.4
RDTE & S •		13-14	6.4
Other	26.6	16.8	4.6
Total		59–60	20.9

* To achieve as high a degree of comparability as possible, adjustments have been made to the basic data available for both the US and USSR. For example, the ruble data, by mission, shown here differ somewhat from the comparable 1968 data shown in Table 16, p. 15. All expenditures for research, development, test, and evaluation (RDT & E) activities associated with military programs as well as expenditures for both civilian and military space programs have been aggregated and are included under RDTE & S (RDTE and space programs). All expenditures for nuclear warheads have been aggregated and are included under "Other." All expenditures for military assistance and civil defense programs have been excluded.

^b Planned total obligational authority (TOA). It should be noted that the pattern of expenditures shown for the US is not representative of the pre-Vietnam period.

^e These data for the USSR are reviewed and updated several times each year. Therefore, if they are to be used for more than general background purposes, the Office of Strategic Research should be consulted to insure that they represent the latest available information. The Soviet expenditures presented in dollars are measures of Soviet programs computed on the basis of US factor costs and do not measure program costs as seen by Soviet planners.

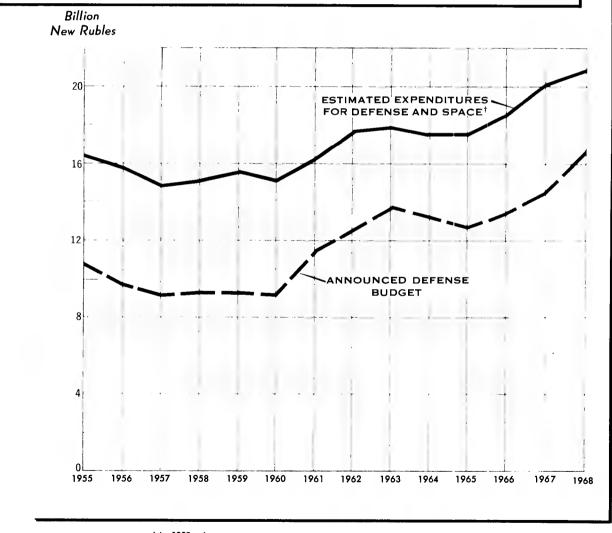

d In 1955 prices.

• Expenditures for research, development, test, and evaluation for all military programs and nuclear energy programs as well as all expenditures for military and civilian space programs.

Of which:						
Military machinery	8.1	9.0	10.9	12.0	13.1	13.7

^{*} These data are reviewed and updated several times each year. Therefore, if they are to be used for more than general background purposes, the Office of Strategic Research should be consulted to insure that they represent the latest available information. The estimates conceptually include all outlays for personnel and other operating costs, procurement of all hardware used by the military establishment (including nuclear warheads), construction of facilities, military and nuclear research and development activities, and all space programs but exclude military assistance programs. Many of the funds required to cover these expenditures come from sources other than the budget category labeled "Defense" by the USSR. Most of the figures in the table are derived from detailed calculations of the estimated size and cost to deploy and operate individual program elements of the Soviet military establishment. These estimates are subject to considerable uncertainty and should not be considered as precise measures. Nevertheless, the estimates are as accurate and as comprehensive as the data available during April 1969 permitted.

- ^b In 1955 prices.
- ^e Including expenditures for tactical aviation.
- d Including expenditures for naval aviation.

f Expenditures for reserve training, militarized security forces, retirement pay, and paramilitary training, in addition to command and support for the active military establishment.

[•] Expenditures for research, development, test, and evaluation for all military and nuclear energy programs as well as all expenditures for military and civilian space programs. These data include personnel costs for military personnel associated with RDTE & S programs. The estimates in this table are derived from analysis of published Soviet financial data and do not represent detailed calculations of the estimated magnitude and cost of individual programs.

^{*} Excluding the armed forces.

b Annual averages of monthly data. Data are for civilian employment and differ from those presented in Figure 15. Data in Figure 15 are for farm employment and include farm operators doing one or more hours of farm work and members of their families working 15 hours or more during the survey week without eash wages. Data in Figure 15 are based on a survey of farm payrolls conducted by the US Department of Agriculture. Data for the agricultural labor force are based on a household survey of the entire population conducted by the US Bureau of the Census. Data in Figure 15 are a more comprehensive count of agricultural employment and are considered to be more comparable to data presented for the USSR, whereas data in this table are considered to be more comparable to data presented for the Communist countries as a whole.

Excluding militarized security forces.

- * Including the aimed forces and the unemployed. Data are annual averages of monthly data.
- b Energy expressed in coal equivalents has a calorific value of 7,000 kilocalories per kilogram.
- * Excluding steel for eastings made in foundries operated by companies not producing ingots.
- d Including steel eastings and steel forgings.
- Including production from secondary plants and copper refined by manufacturers for their own use.
- Data are for barley, corn (excluding silage and forage), oats, rice, rye, sorghum for grain, and wheat.
- Annual average for 1955-59.
- b Data are on a carcass weight, bone-in basis, and are for beef, veal, pork, mutton, lamb, and goat.
 i Data are for "fertilizer years"—that is, the year beginning 1 July of the stated year.
- i Factory sales.
- * Producer sales. Data include monochrome picture tubes.
- ¹ Data for radio-phonograph combinations are factory sales.
- m Prc-1964 data for color receivers are factory sales.
- Including military grant-aid but excluding reexports.

- a Converted at US purchasing power equivalents in approximately the same manner as the data for the NATO countries found in Table 1, p. 1.
- b Including the armed forces and the unemployed. Data are annual averages of monthly data.
- ^o Estimated from planted acreage.
- d Annual average for 1955-59.
- Data are on a carcass weight, bone-in basis, and are for beef, veal, pork, lamb, mutton, goat, and horsemeat.
- ¹ Fabrics after undergoing finishing processes.
- Including finished fabrics.
- ^b Gross register tons.

* An asterisk indicates that the data are unclassified.

- * An asterisk indicates that the data are unclassified.
- Converted at US purchasing power equivalents.
- b Estimates of this Office computed by applying value-added weights to data for commodity production. The data are fragmentary and uncertain; therefore, the index should be regarded as providing only a tentative indication of the general level and trend in production.
 - Data exclude the armed forces but include the unemployed.
- $^{\rm d}$ Energy expressed in coal equivalents has a calorific value of 7,000 kilocalories per kilogram.
- * Including a negligible amount of brown coal.
- 'Including 13.4 million metric tons of pig iron made in "small blast furnaces," of which 6.5 million metric tons were usable for steelmaking.
- * Data are for barley, corn, oats, rice, ryc, and wheat, and also include kaoliang, broad beans, and field peas. Tubers are included on a grain equivalent basis of 4 metric tons of tubers to 1 metric ton of grain.
- h Annual average for 1957-59.
- ⁱ Data are in terms of product weight containing 20 percent nitrogen (N), 18.7 percent phosphoric acid (P_2O_3) , and 40 percent potassium oxide (K_2O) .

^{*} Exports are domestic exports only, excluding reexports, and are valued f.a.s. Except for 1955, exports include data for Estonia,

Latvia, and Lithuania, which are treated separately in the US Department of Commerce statistics.

b The minor differences between the totals shown on this table and those shown on Table 48, p. 45, are due to differences in definition.

^e Excluding US wheat shipped from a Canadian port, as reported by US grain inspectors (4.1 million bushels valued at US \$7.4 million). The final destinations were unknown at the time of export from the US.

d Imports for 1955 and 1960 are for consumption only, whereas imports for 1963-67 are general imports. Imports are valued f.o.b. port of export and, except for 1955, include data for Estonia, Latvia, and Lithuania, which are treated separately in the US Department of Commerce statistics.

[·] Data may include unrefined metal.

a Official statistics of the countries listed, except where data are estimated. Official statistics for exports and imports are f.o.b. except for Hungary, Cuba, and Yugoslavia, where imports are c.i.f.

b Including trade of the Communist countries with Cuba.

[·] Estimated.

d Rounded to the nearest US \$5 million.

[•] Estimated data based on data of trading partner countries.

f Not applicable. Cuba was not a Communist country before 1960.

Excluding US ransom payment of US \$35 million.

SECRET 53

[•] Data for 1955, 1960, and 1963-67 for exports of total petroleum, crude oil, and petroleum products and for exports to the Communist countries are official Soviet statistics. Data for the Free World are derived as residuals and include exports for which the importing country is not specified. Cuba is included in the Free World in 1955 and in the Communist countries in 1960 and 1963-68.

^b Estimated. Value data are based on constant 1967 average prices.

1955-68

- Data do not reflect attrition or equipment originating in Communist countries but delivered by non-Communist countries—except in the case of Cyprus, the United Arab Republic, and the SAM battalion mentioned in footnote 1 below.
 - ^b Data reflect numbers of aircraft, ships, sites, and vehicles having missile capability.
 - ^e Including nonjet combat aircraft, trainers, transports, and helicopters.
 - ^d Number of TU-16 aircraft equipped with ASM's (two per aircraft).
 - Number of fighter aircraft equipped with AAM's (two to four per aircraft).
 - f Number of SAM firing battalions, or sites (six launchers per site, four missiles per launcher).
 - Ship launched. These data constitute the number of Komar- and Osa-class ships equipped with SSM's (two to four per ship).
 - ^h Number of vehicles used as launchers (three missiles per vehicle).
 - i An undetermined number of SAM's have been received.
 - ${}^{\downarrow}$ SAM support equipment has been received, but no missiles have been delivered.
 - ^k Excluding those fighters assembled at the assembly plant at Nasik.
 - ¹ Equipment for one SAM firing battalion originally delivered has been resold to the United Arab Republic.

[•] Nitrogen fertilizer (in terms of nitrogen), phosphorous fertilizer (in terms of phosphoric anhydride), and potassium fertilizer (in terms of potassium oxide).

b The years for the NATO data are "fertilizer years"—that is, in general, the year beginning 1 July of the stated year.

ALL DATA IN THESE TABLES ARE UNCLASSIFIED

CHEMICALS

Table 77

Production of Mineral Fertilizer in the US and the USSR 1955, 1960, and 1963-68

(In Terms of Soviet Statistical Reporting Units *)

							Thousand	Metric Tons
	1955	1960	1963	1964	1965	1966	1967	1968
US b	25.851	32,320	43.835	47.357	53,799	59,616	64.082	64.798
USSR	•	13,867	19,935	25,532	31,253	35,866	40,083	43,400

^{*} Soviet production of fertilizer is usually reported as follows: nitrogen fertilizer on the basis of fertilizer containing 20.5 percent nitrogen, potassium fertilizer on the basis of 41.6 percent potassium oxide, and most types of phosphorous fertilizer on the basis of 18.7 percent phosphoric anhydride. In addition, total production includes an insignificant quantity of microfertilizer.

Table 78

Production of Plastics in the US and the USSR 1955, 1960, and 1963-68

							Thousand	Metric Tons
	1955	1960	1963	1964	1965	1966	1967	1968
US •	1,762 160	2,851 312	4,068 567	4,583 701	5,300 803	6,162 971	6,256 1,114	7,100 1,293

[•] Dry basis, excluding water, solvents, and other liquid diluents.

^b Data are based on US production given in pure nutrients and recomputed to conform to the Soviet method for expressing production. The years for US data represent "fertilizer years"—that is, the year beginning 1 July of the stated year.

^{*} An asterisk indicates that the data are unclassified.

[•] Data are for coal, crude oil, natural gas, and hydroelectric power expressed in terms of coal equivalents (calorific value of 7,000 kilocalories per kilogram), and exclude minor fuels such as peat, shale, and fuelwood.

b The following coefficients were used to convert the sources of primary energy into hard coal equivalents: coal (metric tons), 1.0; brown coal and lignite (metric tons), 0.29; crude oil (metric tons), 1.3; crude natural gasoline (metric tons), 1.5; natural gas (1,000 cubic meters), 1.33; and hydroelectricity (1,000 kilowatt-hours), 0.55. Production of geothermal and nuclear electric power is included at the same ratio as hydroelectricity.

[·] Including data for Luxembourg.

^{*} An asterisk indicates that the data are unclassified.

* Data include only gas from natural gas wells and associated gas from petroleum fields.

A much smaller share of total production in the USSR is believed to be used for repressuring.

- d Gross production.
- Including methane (dry) gas and wet gas from petroleum fields.
- f Production from gasfields only.
- Including gas used for repressuring and gas wasted.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data are for net production—that is, for gas actually collected and utilized as fuel or raw material. They thus exclude gas used for repressuring, as well as gas flared, vented, or otherwise wasted, whether or not it has first been processed for the extraction of natural gasoline.

[•] Data for the US are in terms of net marketed production and agree with the general definition for the NATO data. Data for the USSR are believed to refer to gross production less losses and waste. US gross production (less losses and waste), which would include gas returned to reservoirs in order to maintain horizon pressure (about 8 percent of gross production in 1967) would be as follows (in billion cubic meters):

^{*} An asterisk indicates that the data are unclassified.

85

^a Data are for total (gross) production at generating centers and therefore include transmission losses and station use. (See footnote b.)

b Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.5 percent the thermal electric production to include production that is consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the total gross production. Therefore, no attempt has been made to adjust the net production for hydroelectric power.

Oata are for the year beginning 1 April of the stated year.

- * An asterisk indicates that the data are unclassified.
- Unless otherwise indicated, data are for pig iron and blast-furnace ferroalloys and exclude ferroalloys obtained from electric furnaces and sponge iron.
 - b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."
- ^c Although the Bulgarian yearbooks list these data as pig iron, they probably refer to iron castings because there were no facilities for production of pig iron before 1957.
 - d Including 13.4 million metric tons made in "small blast furnaces," of which 6.5 million metric tons was usable for steelmaking.
 - Including small quantities of foreign-produced pig iron returned to furnaces.
 - Including data for West Berlin, for which separate data are not available.
 - * Data may include some electric-furnace ferroalloys.
 - b Excluding ferroalloys.
 - Data are for 1967.

^{*} An asterisk indicates that the data are unclassified.

• Unless otherwise indicated, data are for the gross amount of marketable iron ores in the state in which they leave the mines, including manganiferous ores but excluding pyrites.

• Excluding manganiferous iron ore containing 5 percent or more of manganese.

· Plan data.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." The metal content of the ore in the NATO countries and other Free World countries follows: Luxembourg and the UK, 27 to 30 percent; Austria, Belgium, France, and West Germany, 31 to 34 percent; Greece, Italy, Portugal, Spain, and the US, 46 to 50 percent; Canada and Japan, 55 percent; Turkey, 55 to 60 percent; Sweden, 61 percent; and India, Norway, and Venezuela, 57 to 62 percent. The metal content of iron ore in Denmark is not available.

d The metal content of the ore in selected Communist countries follows: the USSR, in terms of dressed ore, 55 percent of the ore; Communist China, 20 to 50 percent; North Korea, 40 to 50 percent; Albania, 50 to 55 percent (1 percent nickel); Bulgaria, 38 to 50 percent; Czechoslovakia, 34 percent; East Germany, 25 to 30 percent; Hungary, 24 to 28 percent; Poland, 30 percent; Rumania, 32 to 40 percent; Yugoslavia, 40 percent; and North Vietnam, 55 percent.

¹ Based on an announced increase for 1965 of 24 percent applied to 1964 plan data.

Iron-nickel ore that is mined for its nickel content.

b Shipments.

i Data are for 1967 and are included in the NATO total for 1968.

¹ Data are for concentrates only and exclude titaniferous ores.

k Excluding certain grades.

¹ Merchant ores and concentrates.

m Including data for West Berlin, for which separate data are not available.

^p Including iron sand and pyrites.

[°] Including concentrates.

[•] Unless otherwise indicated, data are for electrolytic and distilled (including redistilled) zinc produced from domestic and imported ores and scrap and other secondary materials.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

[•] Including production from secondary smelters. Production of primary zinc in the US was as follows (in metric tons): 1955, 874,100; 1960, 725,300; 1963, 809,700; 1964, 865,500; 1965, 902,100; 1966, 929,900; 1967, 851,700; and 1968, 896,300.

^d Primary metal only, representing slightly less than 80 percent of total production.

[•] Annual production consists of zinc produced from ore except for approximately 3,000 metric tons in 1955 and 4,000 metric tons annually for 1960 and 1963-68.

Rumania	147	559	1,011	1,099	1,255	1,507	1,679	N.A.	

a Unless otherwise indicated, data are for alternating and direct current motors.

b Beginning in 1965, data include fewer components and spare parts and are not comparable with earlier years.

Rolling mill equipment only.

^b Alternating current motors of 0.25 kilowatt and over.

PRODUCERS' GOODS

Table 119

Production of Electric Generators • in the US and Selected Communist Countries
1955, 1960, and 1963-68

							Thousa	nd Kilowatts
	1955	1960	1963	1964	1965	1966	1967	1968

Bulgaria	10*	29*	6*	33*	13*	10*	85*	N.A.
Czechoslovakia c	963*	1,391*	1,171*	1,325*	888*	2,075*	1,709*	N.A.
Hungary c	225	N.A.	649*	417*	416*	295*	296*	N.A.
Rumania	54*	83*	200*	278*	295*	310*	416*	N.A.

- * An asterisk indicates that the data are unclassified.
- * Turbogenerators and hydrogenerators. Production of diesel generators is believed to be negligible in most instances.
- b Shipments of units 4,000 kilowatts and larger.
- · Generators for steam and gas turbines only.

Table 120

Production of Turbines • in the US and Selected Communist Countries
1955, 1960, and 1963-68

							Thousai	nd Kilowatts
	1955	1960	1963	1964	1965	1966	1967	1968
US b Communist Countries	10,584*	12,899*	14,279*	14,899*	15,451*	18,633*	23,267*	27,432*
USSR •	5,571*	9,200*	11,881*	13,257*	14,625*	15,172*	14,684*	15,700*

Poland d	19*	186*	461*	474*	471*	647*	830*	1,100*
Rumania e	15*	98*	25*	43*	27*	44*	95*	N.A.

- * An asterisk indicates that the data are unclassified.
- Unless otherwise indicated, data are for steam and hydraulic turbines. Most production of turbines is for use in matched sets with generators for production of electric power. In addition, turbines are produced in single units for many purposes, including direct industrial drives, marine propulsion, and pipeline transmission.
- b Shipments of units 4,000 kilowatts and larger. Data are available only for turbines produced as integral units together with generators. Therefore, data for turbines and generators for the US are assumed to be the same. Some turbines are produced in single units but no data are available on this production.
 - · Including a small number of gas turbines.
 - d Steam turbines only.
 - Steam turbines of more than 500 kilowatts only.

[•] Total housing space, which includes living rooms, bedrooms, dining area, and auxiliary space such as bathrooms, kitchens, closets, and inside hallways.

- ^c Data are for 1957.
- ^d Estimated.
- Living space only.
- 1 New and reconditioned buildings.
- Data are for 1956.
- b Socialist sector only.

^b Data are computed from the number of housing starts during the given years. Strictly speaking, therefore, the data on completions are more accurate for intervear comparisons than for any given year. Housing starts were converted to total floorspace by converting to square meters on the basis of varying sizes of structures.

† Preliminary.
† Because of the problems inherent in converting rubles to dollars,
the investment data for the USSR have not been converted. Inasmuch as the purpose of the data is to show general magnitude and
growth, a precise conversion is not required. Data differ from those
presented in the previous Handbook because of a Saviet redefinition
of agricultural investment (see footnote a in Table 10, p. 9).

120

[•] Unless otherwise indicated, data are for beet sugar produced in the calendar year. Data are given in terms of the raw value of centrifugal sugar. Refined sugar is equal to approximately 92 percent of raw sugar by weight. Centrifugal, as distinguished from noncentrifugal, sugar includes cane and beet sugar produced by the centrifugal process and is the principal type of sugar moving in international trade.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

[°] Including cane sugar.

d Refined, including imported raw sugar.

[·] Including raw sugar imported for refining.

Data are for the campaign year beginning in September of the year stated and ending in March of the following year.

[•] Cane sugar only.

^h Crop years ending 30 June of the stated year.

i Including data for Luxembourg.

Data are for the Azores and Madeira only.

- * An asterisk indicates that the data are unclassified.
- Excluding urban systems; plantation, forest, mine, industrial plant, underground, funicular, and cable railways; and short lines of little importance. Unless otherwise indicated, data are for the state or principal railroad system and include all goods and livestock carried during the calendar year and exclude service traffic, mail, and nonrevenue government stores. Freight traffic carried on more than one railroad line within a country is counted only once. Foreign trade freight traffic carried through more than one country, however, is counted in each country. Data for the US include express and mail and are specifically for revenue and nonrevenue freight traffic for a more realistic comparison with Soviet methods of reporting.
 - b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."
 - · Including secondary or private railroads operating as common carriers.
 - d Including performance of railroads owned jointly by Hungary and Austria within Hungary.
 - Including service traffic.
 - ¹ Including mail and passenger baggage. Data are for the year beginning 1 April of the stated year.
 - Including military and government traffic.
 - h Excluding livestock.
 - i Excluding express parcels.
 - Including data for the Ofoten railroad.
 - Lata are for the year beginning 1 July of the previous year.
 - ¹ Excluding data for Northern Ireland.

[•] NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Traffic for Luxembourg, which began in June 1964, is not available in ton-kilometers.

b Internal, intraport, and local water traffic, excluding Great Lakes traffic. For 1966, coastwise and foreign trade traffic within US waters together amounted to about 66 billion metric ton-kilometers. In the same year, traffic on the Great Lakes amounted to 119 billion metric ton-kilometers of domestic trade and 50 billion metric ton-kilometers of US foreign trade.

[•] Data for North Korea are included with ocean freight traffic in Table 145, p. 133.

^{*} An asterisk indicates that the data are unclassified.

[•] Unless otherwise indicated, data are for international shipping and include the performance of ships of less than 1,000 gross register tons (GRT).

b Including Caspian Sea, Danube River, and domestic coastal and intercoastal traffic.

[·] Including coastal traffic.

^d Possibly excluding the performance of some ships flying the Polish flag but under the control of the Chinese-Polish Shipbrokers Corporation. At the end of 1968, there were 15 of these ships, totaling 125,061 GRT.

[·] Coastal traffic only, carried in Chinese and chartered foreign ships.

¹ Including both modern coastal and inland water traffic.

Coastal traffic only.

^{*} An asterisk indicates that the data are unclassified.

a Units of two, four, or more axles. The majority of the production now consists of four-axle units.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

[·] Shipments

 $^{^{\}rm d}$ Data are for 1965 and are included in the NATO totals for 1966–68.

[•] Except for 1955, data are for the freight cars added to the operating stock by the British Railways and the London Transport Boards and for those exported.

f Excluding data for the Saar.

ALL DATA IN THIS TABLE ARE UNCLASSIFIED

^{*} An asterisk indicates that the data are unclassified.

[•] Data are as of the end of the year and exclude light aircraft.

b Including all aircraft that perform commercial for-hire operations. In the US, there are about 2,500 multiengine aircraft of more than 2,000 horsepower, which are operated by private corporations and individuals. The USSR has no counterpart.

[•] The large increase in the inventory shown for helicopters from 1964 to 1965 is probably due to inadequate intelligence reporting of the helicopter inventory before 1965, rather than to any absolute increase of this magnitude.

^{*} An asterisk indicates that the data are unclassified.

^{*} Units of two, four, or more axles. Unless otherwise indicated, data refer to both state and private ownership of cars used on the state or principal railroad system. Data are as of the end of the year. Because of the lack of comparability in data, totals for the NATO and the Communist countries are omitted.

b Units of four or more axles.

[·] Including secondary or private railroads operating as common carriers.

d In 1968, about 90 percent of the freight cars had four or more axles, and these cars accounted for at least 96 percent of total freight-carrying capacity.

[•] Excluding narrow-gauge rolling stock.

f The majority are four-axle units.

Data are for 1966.

^h Data for government railroads are for 1967, and data for private railroads are for 1965.

i Excluding privately owned tank cars.

i Including data for Northern Ireland.

* Ships of 1,000 gross register tons (GRT) or more. Unless otherwise indicated, data are as of the end of the year. Data for the NATO countries include all combination passenger and cargo ships, whereas, unless otherwise indicated, those for the Communist countries exclude passenger ships that have small cargo capacities.

7,436*

- b Data are as of midyear.
- Excluding ships operating only on the Great Lakes.
 Excluding the Caspian Sea fleet and including refrigerator ships and tankers serving the fishing fleet.
- e Before August 1968, a few additional Bulgarian-owned ships were operated under the flags of Free World countries.
- From 1955 until March 1967, an undetermined number of Czechoslovakflag ships were jointly owned with Communist China.
- Including some ships flying the Polish flag but under the control of the Chinese-Polish Shipbrokers Corporation. At the end of 1968, there were 15 of these ships, totaling 125,061 GRT.
 - h Including coastal passenger ships.
- Except for 1960, data include a number of ships jointly owned by the Chinese-Albanian Joint Stock Shipping Company. At the end of 1968, there were three of these ships, totaling 22,162 GRT.

Albania	Lek	5	12.5	5.56	8.4	
Cuba	Peso	1	1	1.11	1.11	
Mongolia	Tugrik	4.0	4.5	4.44	4.18	
Yugoslavia	Dinar	12.5	12.5	13.9	13.9	

[•] Official rates unless otherwise indicated. These rates are used for converting trade statistics.

^b Rates used for noncommercial transactions such as diplomatic, tourist and student expenditures, personal remittances, and the like. Some countries have special rates for tourists and personal remittances in addition to the noncommercial rate.

[•] The unofficial rates actually used in East German accounting of foreign trade transactions. Official rates still listed, but not used, are 2.22 DME to US \$1 and 2.47 DME to 1 ruble.

d Based on the cross rate of exchange between the yuan and UK pound sterling.
